

M2.12 – Ongoing module development supporting prioritised features requested by users through WP3

The decision was taken in Month 1 of ViBRANT to upgrade the code base for the Scratchpads from Drupal 6 to Drupal 7. This decision was made based on the average life cycle of a single Drupal release, and also because a number of features that we had developed for Drupal 6 were now included in the core of Drupal 7. There will be a number of other benefits from upgrading the Scratchpad code base, including a performance increase, and reliability improvement. For this reason, a number of the feature requests that have come to us from WP3 and also via the Scratchpad issues queue¹, have had to be delayed. These feature requests will, assuming they are reasonable, be added to the queue of issues for Scratchpads 2.0 once it is released.
